SUMMARY

AI and data engineer with 2+ years of enterprise experience turning finance, operations and supply chain requirements into practical solutions. Combines Python, SQL and API integration with independent LLM applications built using FastAPI and React. Experienced working directly with business users, troubleshooting technical issues and refining tools through feedback. Brings requirements discovery, workflow design and clear communication to customer-facing technical delivery. MSc Big Data Science and Anthropic Claude Certified Architect - Foundations.

CERTIFICATIONS

Claude Certified Architect - Foundations | Anthropic | September 2026
Verify credential on Credly

Relevant knowledge: agentic workflows, MCP integrations, context management and reliable AI application design.

EXPERIENCE

Associate Developer 2, Data Engineering and Analytics | Tyson Foods IT Solutions
Apr 2022 - Aug 2024 | Bengaluru, India

- Worked directly with finance, operations and supply chain stakeholders to clarify problems, define requirements and translate them into working data and reporting solutions.
- Prepared and validated large enterprise datasets, including a **1.5 billion row BigQuery fact table**, then configured Power BI dashboards and KPI logic used in daily workflows.
- Built Python automations, SQL data layers and dashboards, iterating on user feedback while resolving data issues, performance bottlenecks and delivery blockers.
- Supported Power BI governance through usage monitoring, efficiency reviews and Collibra naming conventions, helping teams find, trust and maintain shared reporting assets.
- Managed datasets that contributed to **more than $25M in identified cost savings** and communicated progress, risks and tradeoffs to technical and nontechnical stakeholders.

AI Developer Intern | NxtGen Data Infinite Center
Oct 2021 - Jan 2022 | Bengaluru, India

- Built real time computer vision workflows from data preparation to deployed inference using Python, OpenCV and DeepStream, while documenting and testing practical use cases.

PROJECTS

ThoughtGraph, RAG Answer Engine and Knowledge Graph | Python, FastAPI, Postgres, pgvector, Neo4j, React

- Built a self directed AI product that turns new content into a shared knowledge graph and answers questions through retrieval, background ingestion and a user facing interface.

Interactive 3D Earth, LLM Integrated Data App | React, TypeScript, FastAPI, Claude Code

- Owned the solution from concept to working product, designing the user flow, backend, frontend and model integration for natural language exploration of geospatial data.

Premier League Climate Intelligence | Python, SQL, scikit-learn, Streamlit

- Scoped and shipped a 21 phase analytics workflow that combined three data sources, engineered **39 features** and delivered a usable dashboard from an open ended question.

Planton, Global Climate Risk Platform | Python, GCP, BigQuery, Streamlit, Claude Code

- Built repeatable ingestion, transformation and model workflows that publish climate forecasts to **BigQuery** and support reliable stakeholder reporting.

EDUCATION

MSc Big Data Science | Queen Mary University of London | Dec 2025

BEng Electronics and Communications Engineering | MVJ College of Engineering | Aug 2017 - Aug 2021

TECHNICAL SKILLS

Customer and Delivery: Requirements discovery, solution configuration, data preparation, workflow design, implementation support, documentation, prioritisation, stakeholder communication

AI and Product: Claude Code, Codex, Cursor, prompt engineering, LLM integration, agentic workflows, rapid prototyping

Data and Engineering: Python, SQL, BigQuery, Power BI, FastAPI, REST APIs, React, TypeScript, GCP, Git, Docker, Power Automate, Collibra
